

AutoRABIT Platform: Control the Salesforce Lifecycle

Unify AI, pipelines, code security, governance, data management, and workflows in one platform built for Salesforce.

Salesforce becomes difficult to accelerate at enterprise scale. Teams manage AI agents, move XML metadata, resolve fragile dependencies, and govern multi-org environments without a native DevSecOps control plane. At the same time, AI-generated code accelerates insecure patterns, security configurations drift faster than policies can be enforced, and generic CI/CD tools lack Salesforce awareness.

The result is clear. Salesforce becomes one of the hardest parts of the business to manage, secure, and recover when something goes wrong.

AutoRABIT establishes a control layer across the Salesforce lifecycle. By bringing AutoRABIT ARM, AutoRABIT CodeScan, AutoRABIT Guard, and AutoRABIT Vault into a unified workflow, it aligns DevOps, security, and data resilience so teams can move faster, enforce policy continuously, and reduce risk at every stage of change.

How the AutoRABIT Platform Works

Release Orchestration: AutoRABIT ARM

Manage and automate Salesforce changes from development to production

Code Quality and Security: AutoRABIT CodeScan

Catch quality issues, security risks, and standard violations early.

Security Monitoring and Governance: AutoRABIT Guard

Monitor configurations, permissions, and data exposure across Salesforce orgs.

Backup and Recovery: AutoRABIT Vault

Protect critical Salesforce data and recover quickly when changes go wrong.

Visibility and Traceability: Across the Platform

Track changes, support policy enforcement, and provide clear evidence across the full lifecycle.

These capabilities form the control layer required to manage Salesforce at enterprise scale. They establish a foundation for managing AI-driven change by applying consistent checks, visibility, and recovery across both human- and AI-generated work.

Transformative Benefits

One Platform for Salesforce Change: Bring AI acceleration, release management, security, governance, and backup together in one place.

Move Fast with No Surprises: Automation and embedded policy enforcement ensure every change is tested, compliant, and production-ready.

Focus on What Matters: Ship features and products by finding code issues, security gaps, and exposure before they escalate.

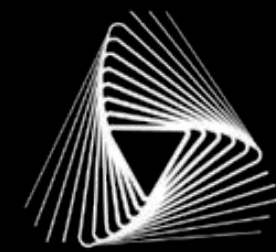

See What Others Miss: Gain real-time visibility into code, configurations, and data exposure.

Scale AI-Driven Change Safely: Apply guardrails as development speeds increase and change volume grows.

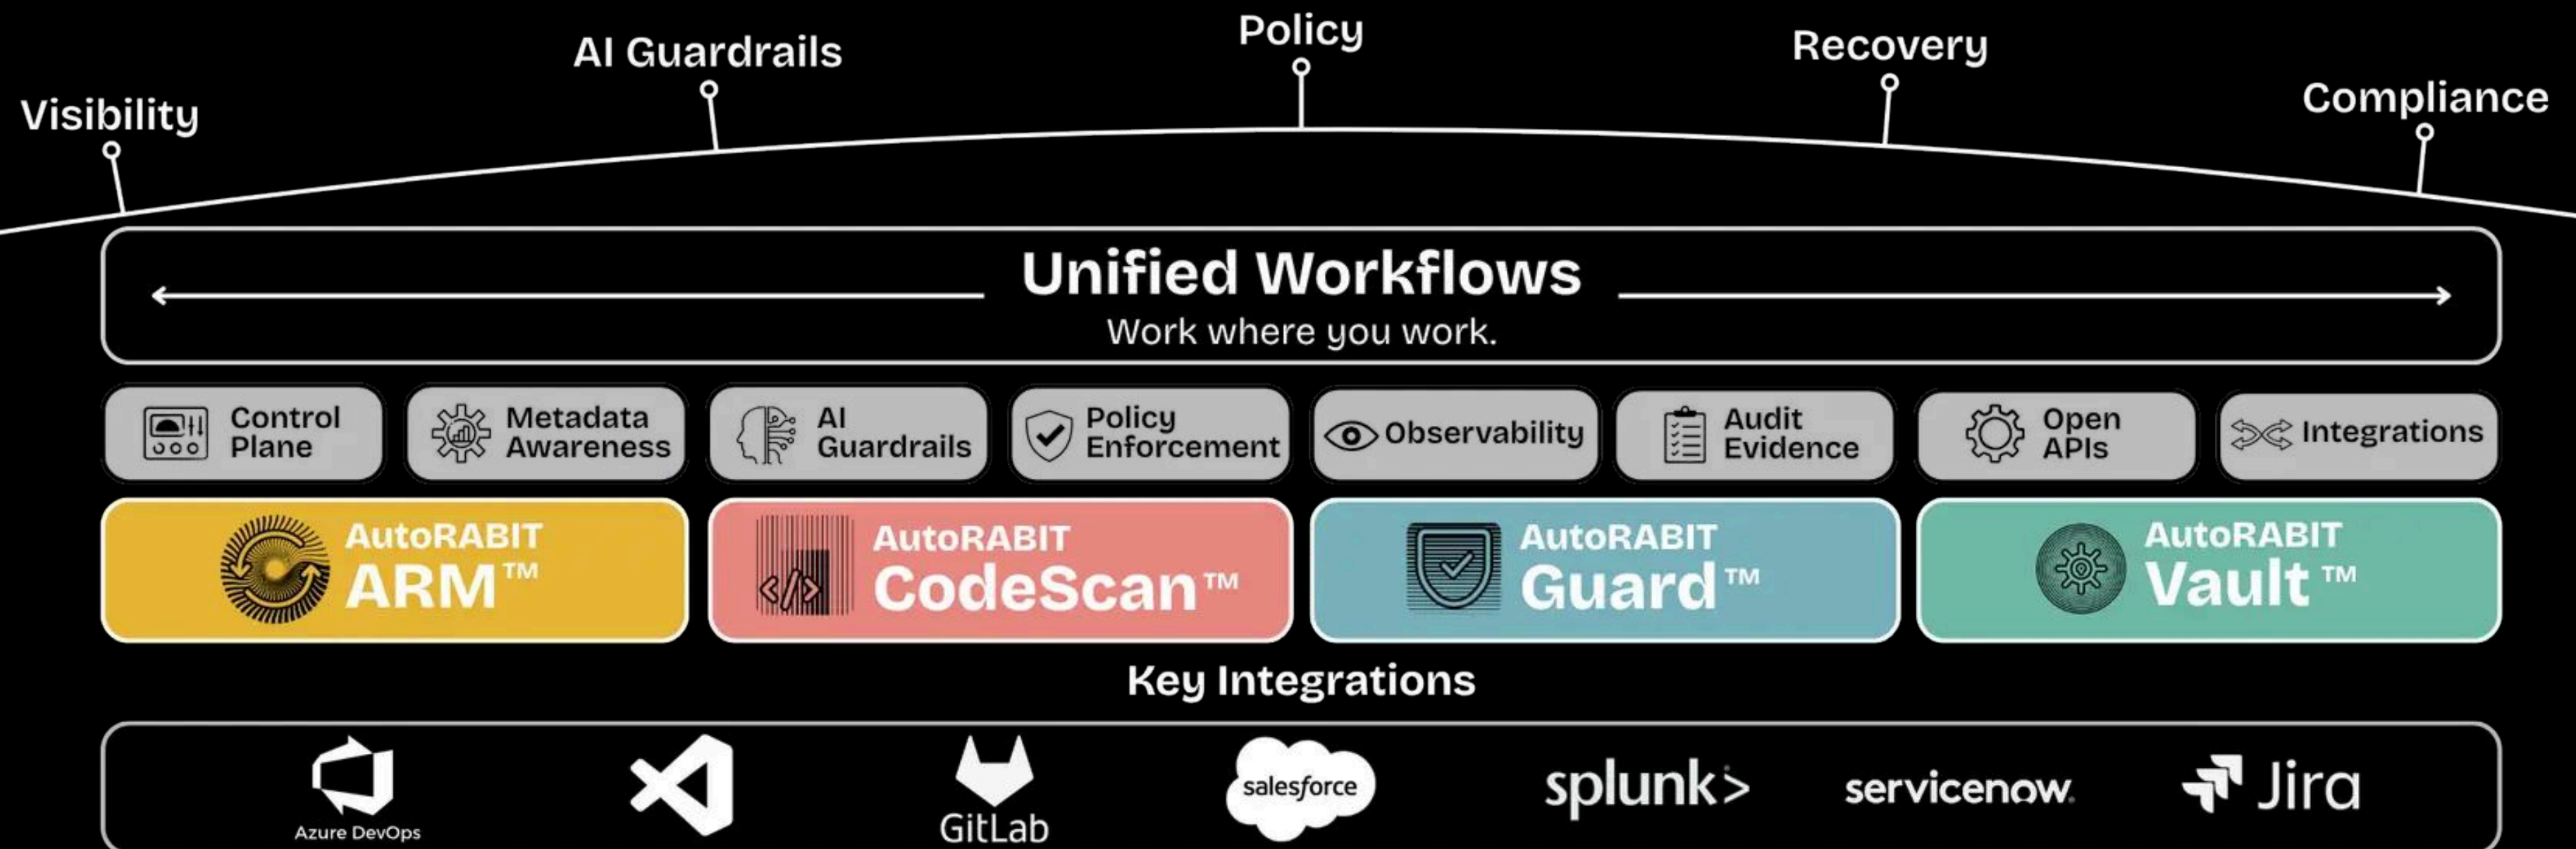

Build Resilience by Design: Protect critical Salesforce data with automated backup, rapid recovery, and governance controls.

autorabit Platform

Govern AI-accelerated Salesforce change with confidence.

The control pane for secure, compliant Salesforce change at scale.

Connect, don't replace. Extend your existing enterprise tool chain into Salesforce.
